GMinsta Web Application

Automated Selenium Test Report

Execution Date: 2026-06-12

04 Test Cases

TEST CASE ID TC-01	TEST CASE NAME Valid Login	CATEGORY Authentication — Login
Objective	Verify that a registered user can log in with correct credentials and is redirected to the Feed page with session token stored.	
Pre-conditions	GMinsta app running at localhost:3000. User account exists in DB. Browser is on login page (/). No existing auth token in localStorage.	
Expected Result	User is redirected to /home page; token stored in localStorage.	

Step No.	Action / Input	Test Data	Expected Outcome
1	Open browser and navigate to base URL	*http://localhost:3000/*	Login page loads; login form and input fields visible
2	Enter registered email in Email field	*selenium_17182104@example.com*	Email field accepts input; no error shown
3	Enter correct password in Password field	*Password123! (masked)*	Password field accepts input; characters are masked
4	Submit the login form	*Submit #LoginForm*	Form submitted; authentication request POSTed to API
5	Wait for API response	*API POST /api/auth/login*	API returns 200 OK with token and user details
6	Verify redirect to Home feed page	*Wait for URL to contain /home*	Browser navigates to /home; main feed page content loads
7	Verify localStorage stores token	*localStorage.getItem("token")*	Token value is a non-null JWT string

Actual Result / Status	**Redirected to /home feed page. Key 'token' verified in localStorage. | STATUS: PASS**

TEST CASE ID TC-02	TEST CASE NAME Invalid Login	CATEGORY Authentication — Login
Objective	Verify that login fails gracefully with wrong credentials and an appropriate error message is displayed to the user.	
Pre-conditions	GMinsta app running. Browser is on login page (/). No auth token present.	
Expected Result	Error feedback shown; user remains on login page; no token stored.	

Step No.	Action / Input	Test Data	Expected Outcome
1	Navigate to Login page	*http://localhost:3000/*	Login page loads correctly
2	Enter registered email address	*selenium_17182104@example.com*	Email field accepts input
3	Enter an incorrect password	*WrongPassword123!*	Password field accepts input
4	Submit the login form	*Submit #LoginForm*	Form submitted; request sent to API
5	Wait for API error response	*API POST /api/auth/login → 401 Unauthorized*	Error response received from server
6	Verify error feedback displayed	*Check text of #message*	Validation error message appears inside `#message` label
7	Verify user remains on login page	*Check current URL*	URL still matches http://localhost:3000/; not redirected

Actual Result / Status	**Error feedback displayed in '#message'. URL remained at base path. | STATUS: PASS**

04 Test Cases (Continued)

TEST CASE ID TC-03	TEST CASE NAME New User Registration	CATEGORY Authentication — Register
Objective	Verify that a guest visitor can register a new account with valid details and is shown a success message.	
Pre-conditions	GMinsta app running at localhost:3000. Browser is on register page (/register). No active session.	
Expected Result	Registration success message displayed in #message; user can proceed to login page.	

Step No.	Action / Input	Test Data	Expected Outcome
1	Navigate to Registration page	*http://localhost:3000/register*	Register page loads with register form inputs visible
2	Enter unique username	*selenium_user_17182104*	Username field accepts input
3	Enter valid, unique email address	*selenium_17182104@example.com*	Email matches format validation and is accepted
4	Enter secure password	*Password123! (masked)*	Password characters are masked and length satisfies validation
5	Confirm password	*Password123! (masked)*	Characters match password input block
6	Submit the registration form	*Submit #registerForm*	API registers new user and returns success status 201 Created
7	Verify registration success UI text	*Check text of #message*	Success message text containing "Registration successful" is visible

Actual Result / Status	**User registered successfully. "Registration successful" verified. | STATUS: PASS**

TEST CASE ID TC-04	TEST CASE NAME Uploading a Post	CATEGORY Post Management
Objective	Verify that a logged-in user can create a new post with text and an image URL, and it renders immediately in the feed.	
Pre-conditions	User is authenticated, redirected, and active on the Feed page (/home).	
Expected Result	Post panel toggles open, form submits, and new post appears at top of feed.	

Step No.	Action / Input	Test Data	Expected Outcome
1	Click the "Create Post" toggle button	*Click #toggleCreate*	Post creation slide panel collapses open (#createPanel visible)
2	Enter caption details in content area	*"Welcome to GMinsta! Active testing..."*	Content field (#content) accepts string caption input
3	Enter absolute image URL	*https://via.placeholder.com/400*	Image URL input field (#imageUrl) accepts link value
4	Submit the post creation form	*Submit #postForm*	API executes POST /api/posts, returns 201 Created
5	Locate post node inside main feed	*Search DOM for post caption content*	New post is appended dynamically at the top of the feed
6	Verify post image renders	*Check src attribute on post image tag*	Image renders correctly using the input URL value

Actual Result / Status	**Post uploaded successfully and verified at the top of the feed. | STATUS: PASS**

04 Test Cases (Continued)

TEST CASE ID TC-05	TEST CASE NAME Editing Profile Details	CATEGORY Profile Mgmt
Objective	Verify that a logged-in user can modify their username, bio details, and profile picture, and changes reflect instantly.	
Pre-conditions	User logged in, currently visiting profile page (/profile) with edit panel available.	
Expected Result	Profile form updates user schema; profile headers render updated credentials.	

Step No.	Action / Input	Test Data	Expected Outcome
1	Navigate to Profile view & click edit button	*Click #toggleEditBtn*	Edit profile container (#editPanel) expands and becomes visible
2	Clear and update Username field	*selenium_updated_17182104*	Input updates username in text field
3	Clear and update Bio description	*"Updated bio 17182104"*	Bio textarea accepts updated bio text
4	Enter new profile picture link	*https://via.placeholder.com/128*	Profile picture text field accepts image URL input
5	Submit the profile update form	*Submit #profileForm*	Form submitted; PUT request sent to API; panel collapses
6	Verify username on header updates	*Check text of #topUsername & #displayName*	Display headers show updated username value
7	Verify bio on page updates	*Check text of #bioText*	Bio container displays updated bio description

Actual Result / Status	**Profile data modified successfully. Display username and bio updated on page. | STATUS: PASS**
